SP⁴

SCREEN PRINT

Screen printing is a printing technique whereby a mesh is used to transfer ink onto a substrate. This is the most common method of imprinting on promotional items and apparel.

E

EMBROIDERY

Embroidery is stitched with a computerised embroidery machine using patterns digitised with embroidery software. Artwork must first be digitised, which is the specialised process of converting two-dimensional artwork into stitches.

HP

HEAT PRESS

Heat press is imprinting a design or graphic onto a substrate, with the application of heat and pressure for a pre-set period of time.

**DYE
SUB**

DYE SUBLIMATION

Dye Sublimation is digitally printed on a coated paper and then transferred to the substrate.

DOVE

DOVE STICKER

Digitally printed directly onto a vinyl adhesive substrate that can be cut into a variety of sizes. The stickers are then coated with a polyurethane to give it a dome like appearance creating a 3D effect.

CO₂

CO₂ LASER ENGRAVING

This method is achieved by burning the top layer of the substrate with a thin laser beam that cuts through the product creating a lasting detailed logo.

YAG

YAG LASER ENGRAVING

This process is achieved by a solid-state laser that engraves the logo from metal surfaces, giving you a detailed subtle logo.
